

Bias Detection Report

This report analyzes the correlation between the 'foreign worker' status and 'Credit risk (Good/Bad)' in the provided dataset.

The Cramér's V value of 0.0763 indicates a very weak association between the 'foreign worker' status and 'Credit risk (Good/Bad)', suggesting no significant bias.

The maximum Z-value of 0.4187 suggests minimal bias, with slight variations in the distribution of credit risk between foreign and non-foreign workers.

Overall, the dataset does not exhibit significant bias concerning the correlation between foreign worker status and credit risk. The results suggest that the dataset is reliable for further analysis, with only minor considerations needed for potential bias.
