

Bias Detection Report

The bias type is Correlation, and the relevant features are 'reason' and 'Mjob'.

The results from the `categorical_categorical_correlation_cramers_v` tool indicate a moderate correlation between the reason students choose their school and their mother's job, with a Cramers V value of 0.139154413144422.

The results from the `execute_python_code` tool also suggest that there is evidence of a correlation bias between the two categorical features, with a Chi-square statistic of 22.946281576618656 and a p-value of 0.02818547173558085.
