

Bias Detection Report

The age distribution in the dataset exhibits a low to moderate level of bias, primarily due to the moderate negative skewness.

The skewness of the age distribution is approximately -0.82, indicating a moderate negative skew (Level 3 bias).

The kurtosis is approximately -1.19, indicating a platykurtic distribution with no significant bias.

Outlier detection shows no outliers (Level 1 bias).

Overall, the age distribution is consistent and reliable, with an overall bias level of Level 2.
