

Bias Detection Report

The correlation bias between 'Age in years' and 'Credit risk (Good/Bad)' is detected.

The results from the Hilbert-Schmidt Independence Criterion (HSIC) method show a value of 0.016745188594990836, indicating a moderate level of correlation bias.

The results from the Chi-Square test show a value of 57.47739631256566, indicating a significant association between the two features.
