

Bias Detection Report

This is a report introduction.

The analysis reveals a slight bias in the Decile Score across different ethnicity groups, with some groups having a higher or lower mean Decile Score compared to the overall mean.

The N-Sigma values for each ethnicity group indicate a slight bias in the Decile Score, with the African-American group having the lowest N-Sigma value (0.273703) and the African-Am group having the highest N-Sigma value (0.995002). The bias levels for each group are: ['Level 2: Slight bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias', 'Level 1: No bias']. The overall bias level is Level 2: Slight bias.
