

Bias Detection Report

The balance metric is 0.5517475271537683, which indicates a moderate level of bias in the custody status distribution. The Shannon entropy is 1.426246667558119, which suggests that the distribution is not highly uncertain or unpredictable. The max/min ratio is 2008.6000000000001, which indicates a significant difference between the most frequent and least frequent custody statuses.
