

Bias Detection Report

Bias Detection Report for Education Levels

The analysis of the education levels in the dataset indicates significant bias.

Shannon Balance metric: 0.7328

Max-Min Ratio: 205.90

Corrected Gini Index: 0.8097

Adjusted Gini Index: 0.8637

These metrics suggest that certain education levels dominate the dataset, which could affect the reliability of analyses that assume a balanced distribution.
