

# Bias Detection Report

This is a report introduction.

The bias type is Correlation, and the relevant features are 'admission\_type' and 'patient\_gender'.

The bias level is Level 5, which indicates extreme bias. This is because the Cramér's V value is 0.6587452890633345, which is greater than 0.5, indicating a strong association between the features.

The Cramér's V value suggests that there is a significant correlation between the admission type and patient gender, indicating bias in the decision-making process.
