

# Bias Detection Report

The age distribution in the dataset shows a skewness of 0.5587433694130484, indicating a moderate level of bias towards older ages. The bar chart and pie chart visualizations also suggest that the age distribution is not uniform, with certain age groups being overrepresented.

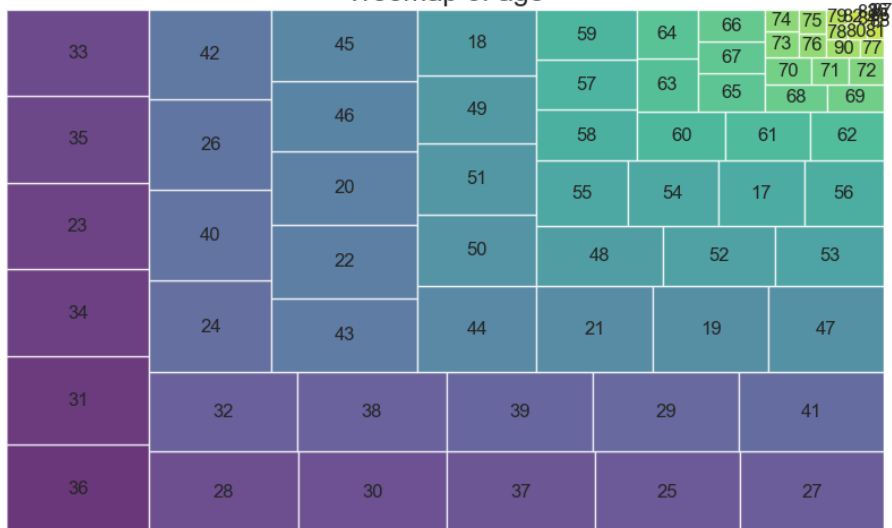

Pie Chart of age

The treemap and heatmap visualizations provide further insights into the age distribution, with the treemap showing the proportion of each age group and the heatmap showing the density of the age distribution.
