**Bias Detection Report** 

Bias Detection Report: Age Feature

Max/Min Ratio Method: The Max/Min Ratio for the age feature is 1703.0, indicating Extreme Bias.

This suggests a significant imbalance in the distribution of the age feature, pointing towards

potential bias.

Shannon Entropy Method: The Shannon Entropy for the age feature is 3.67, with a Max Entropy of

4.08, leading to an Entropy Deviation of 0.41. This indicates a Minimal Bias, suggesting a relatively

balanced distribution.

Conclusion: The age feature shows signs of bias. While the Max/Min Ratio method suggests

Extreme Bias, the Shannon Entropy indicates Minimal Bias. Further investigation is advised to

ensure comprehensive bias detection.
