Bias Detection Report

This report summarizes the findings of the bias detection task. The task was to detect whether there's a connection between an individual's CreditHistory and their job type.

The Cramér's V value is 0.07629925238843341, which indicates a very weak association between the two features. This suggests that there is no significant correlation bias between an individual's CreditHistory and their job type.
