Bias Detection Report

This is a report introduction.

The bias type is Correlation, and the relevant feature is 'paid'. The bias level is Level 2, which indicates a slight bias. The N-Sigma values for each category of 'paid' are -0.093684 for 'no' and 0.110765 for 'yes'. This suggests that students who attend paid classes tend to have slightly higher grades than those who do not.
