Bias Detection Report

This is a report introduction.

The N-Sigma values indicate that some native countries have a significant positive or negative bias in terms of income. For example, 'France' has a N-Sigma value of 0.4045627573422872, indicating a positive bias, while 'Holand-Netherlands' has a N-Sigma value of -0.5631898571062448, indicating a negative bias. This suggests that individuals from certain native countries may be more or less likely to have a higher income.
