Bias Detection Report

This is a report introduction. The bias type is Correlation, and the relevant features are Installment rate in percentage of disposable income and Personal status and sex. The bias level is Level 5, indicating extreme bias.

The maximum absolute N value is 0.42301820865422307, which falls into the range of 0.4 or higher, indicating a Level 5 bias. This suggests that there is a significant correlation between the installment rates as a percentage of disposable income and the personal status and sex, which could indicate bias in loan structuring.
