Bias Detection Report

This is a report introduction. The bias type in this case is 'Distribution' since we are analyzing the distribution of the 'paid' column. The relevant feature is the 'paid' column. Based on the results, the bias level is 'Level 1' since no potential bias was detected.

The Shannon entropy value was close to 1, indicating a relatively balanced distribution. The code executed using the execute_python_code tool also confirmed that there is no potential bias detected in the 'paid' column.
