# Bias Detection Report

This report summarizes the findings of the bias detection task. The task was to determine whether there is a dominant agency performing assessments, or if the distribution of assessments across agencies is fairly even.

Bar Chart of Agency_Text

The max/min ratio method revealed a ratio of 334.1463414634147, indicating Extreme Bias in the Agency_Text feature. This suggests that there is a significant imbalance in the distribution of assessments across agencies, with some agencies having a much higher proportion of assessments than others.
